

START / STOP ELIMINATOR

Quick Start Guide

Rev 20031

STEP 1

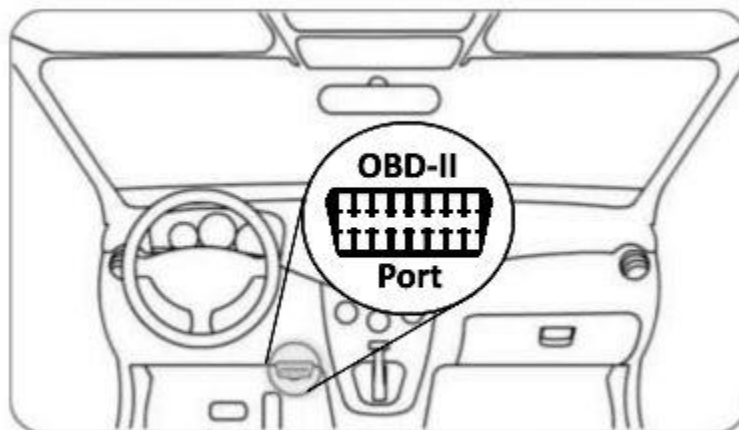

INSERT

Insert the Start / Stop Eliminator into the vehicles OBD-II port located below the steering wheel, typically at the bottom edge of the dashboard. It will blink BLUE once immediately after insertion indicating it is working.

STEP 2

VERIFY

Turn the ignition on – the Start Stop system will default to OFF (no need to press the button). If it does not default to off the first time you plug in the Start / Stop Eliminator, firmly push it into the diagnostic port to ensure it is fully seated.

STEP 3

ENJOY!

You can use your Start Stop button as you normally would. The Start Stop Eliminator simply remembers if the auto start/stop system is enabled or disabled - eliminating the need to press the button every time you turn the vehicle on!
